

A parent's worst nightmare is something bad happening in their home at night. Families haven't traditionally had many safety options as conventional security lights are cumbersome and have limited features.

Not anymore! PoEWit lights provide homes with smart, secure, easily maintained lighting that protects the home.

CLOUD INTELLIGENT LIGHTS

KEEP THE FAMILY SAFE AT NIGHT AND DURING POWER OUTAGES

POEWIT SOLUTIONS
REPLACE LEGACY
LIGHTS WITH
MULTI-PURPOSE
INTELLIGENT DEVICES

When everyone goes to bed and the lights go out, finding the path to the bathroom or the nearest exit can be difficult. Night lights currently on the market are not the answer. Most need to be plugged into an AC outlet, thus the location is compromised and the light often can't be placed where you need it most. Also, they can get unplugged when vacuuming, blow-drying hair, or even just accidentally.

POEWIT'S INTELLIGENT, DISCRETE LED LIGHTS DELIVER MANY BENEFITS

Battery operated night-lights and flashlights are better, but the onus falls on the homeowner to remember to regularly change the battery. Everyone is too busy these days to worry about whether a night light is secure or a battery is charged. Regardless, all of these types of night-lights and flashlights are dumb - everything needs to be done manually, they don't work on a schedule, and the intensity and shade of the light can't be changed.

Wouldn't it be great if certain lights automatically turned brighter in case of an emergency? Wouldn't it be great if these lights stayed on in the case of a power outage and directed your family to safety?

PoEWit offers an alternative: its smart, modern, intelligent lights deliver many benefits. PoEWit products **become permanent infrastructure fixtures** in the walls and add value to a home. They are simple to install and quite flexible in customization. These products are not limited to outlet locations and are easier and safer to install than high voltage, Romex cabling systems.

In emergencies, there is no guarantee that they are charged or working. In some cases, security professionals will deploy commercial emergency lighting in homes. But these devices are eyesores that detract from a home's ambiance and, ultimately, its value.

PoEWit's lighting system delivers a wide range of software capabilities but is simple to operate. Each mode is user-configurable via a smart-phone app. Since the solution is monitored by the cloud, it understands what is occurring and adjusts accordingly. In the event of an Internet connection disruption, the system will even fail-over to local mode so no internet connection is needed.

PoEWit lights can be strategically installed to provide a safe path to bathrooms, near stairwells, down hallways, and to exit a home in case of an emergency.

They go wherever you wire a low voltage Cat5 cable because they are powered and networked by PoE. The PoEWit solutions also double as custom night safety lights because they can be dimmed to a user's preference, so they reduce energy costs and do not disturb your sleep. The lights can be programmed to schedule when dimmer lights come on, when night lights should illuminate, and when waking lights are triggered. All that is needed is for the owner to set the lights to On, Off, and the desired light intensity levels. The lights work with a PoEWit Uninterruptible Power Supply or UPS during a power outage. When the UPS senses a loss of power, it triggers a power-out mode that turns on important lights and turns off unnecessary lights to extend battery life.

POE POWERED LIGHT

The PoEWit devices required for this application are:

- Any PoEWit Cloud Intelligent LED PoE Powered Lighting
- PoEWit Cloud Intelligent Perpetual PoE Network Switch or PoEWit Single Port PoE Injector 90W 802.3bt
- PoEWit Cloud Intelligent Uninterruptible Power Supply UPS with Power Conditioner.

Homeowners have enough to worry about nowadays. They desire simple, powerful, cloud-enabled, digital solutions that are discrete and a part of their home's infrastructure. The PoEWit lighting solutions enable custom installers to provide their customers with leading-edge solutions at reasonable prices so their customers have smart, secure, easily maintained lighting that protects their homes.
